SCN

The image shows a coronal section of a brain, likely from a rodent, with a blue fluorescent signal. The signal is concentrated in the subchiasmatic nucleus (SCN), which is located in the hypothalamus. The signal appears as a bright blue area on the left side of the image, with a smaller, less intense spot on the right side. The rest of the brain tissue is dark, indicating no significant fluorescence. A vertical line runs down the center of the image, and a horizontal line runs across the middle, intersecting at the center of the brain section.
