Arc

The image is a coronal brain scan, likely a PET or SPECT scan, showing a cross-section of the brain. A vertical line and a horizontal line intersect at the center, forming a crosshair. The brain tissue is represented by various shades of blue and cyan. A distinct, bright yellow and red spot is visible in the upper-left quadrant of the brain, indicating a region of high metabolic activity or a lesion. The rest of the brain appears relatively uniform in color, with some lighter blue areas suggesting different tissue densities or functional regions.
