A anterior

This is a coronal PET scan of a human brain. The image shows a cross-section of the brain with a color scale where blue represents low metabolic activity and yellow/green represents high metabolic activity. A prominent focal area of increased activity is visible in the lower-left quadrant of the image, corresponding to the left anterior region. The rest of the brain shows relatively uniform, low-level activity. A white crosshair is overlaid on the image, with the vertical line passing through the center and the horizontal line passing through the focal area of activity.
