

ABA: 69080044

CA1

This is a fluorescence microscopy image of a brain section. The image is divided into four quadrants by a white crosshair. The left half of the image shows a bright, irregularly shaped region, likely representing the CA1 area of the hippocampus. This region is predominantly blue, with some yellow and red highlights indicating areas of higher intensity or specific staining. The right half of the image is mostly dark blue, suggesting a lower level of fluorescence or a different tissue type. The text 'ABA: 69080044' is located in the top left corner, and 'CA1' is in the bottom left corner.
