CA2/CA3

This is a fluorescence micrograph of a brain section, specifically the CA2/CA3 region. The image is predominantly blue, indicating the presence of a fluorescent signal. A vertical black line runs down the center of the image, likely representing a midline or a specific anatomical structure. The blue signal is distributed across the brain tissue, with some brighter spots visible. The image is overlaid with a white grid consisting of two vertical and one horizontal line, dividing the field of view into four quadrants.
