CA1

The image displays a coronal cross-section of a brain. A vertical color scale on the left side of the brain indicates activity levels, ranging from blue (low) to yellow (high). A prominent, bright yellow and white vertical band of high activity is visible in the left hemisphere, extending from the top to the bottom of the brain slice. The rest of the brain tissue shows low activity, represented by blue and black colors. A white crosshair is overlaid on the image, with a vertical line passing through the center of the brain and a horizontal line passing through the middle of the slice.
