VMH

The image shows a coronal section of a brain, likely from a rodent, with a blue highlighted region in the left hemisphere. The brain is centered on a vertical white line, and a horizontal white line crosses it. The blue area is located in the upper-left quadrant, roughly between the vertical line and the left edge, and between the horizontal line and the top edge. It has a small, bright blue spot in its center. The rest of the brain is dark, and the background is black.
