CA1

The image shows a coronal cross-section of a brain. A large, irregularly shaped region in the left hemisphere (viewer's right) is highlighted in a solid blue color. This region appears to be the cerebral cortex and underlying white matter. A small, bright blue spot is visible near the top of the blue region. The rest of the brain slice is black. A white crosshair is overlaid on the image, with a vertical line passing through the center and a horizontal line passing through the middle of the brain slice.
