Cb lobe

A brain scan image, likely an axial slice, showing a cluster of activation in the left hemisphere. The activation is represented by a color scale from blue to yellow, with the most intense area being yellow. The cluster is located in the posterior region of the left hemisphere, near the occipital lobe. The rest of the brain is shown in blue, indicating low or no activation. A white crosshair is visible on the image, with the vertical line passing through the center of the brain and the horizontal line passing through the cluster of activation.
