CA2/CA3

This is a fluorescence microscopy image of a brain section, likely from a rodent, showing the CA2/CA3 region. The image is predominantly blue, with a central vertical structure (possibly the corpus callosum) appearing as a dark vertical band. There are several bright, localized spots of fluorescence, particularly in the lower-left quadrant, indicating areas of high signal intensity. The image is overlaid with a white grid consisting of one vertical and one horizontal line, dividing the field of view into four quadrants.
