VMH

The image shows a coronal section of a brain, likely from a rodent, with a red fluorescent signal. The signal is concentrated in the ventral medial hypothalamus (VMH) region, which is highlighted by a red overlay. The rest of the brain tissue is shown in grayscale. A vertical line and a horizontal line intersect at the center of the brain, dividing it into four quadrants. The red signal is located in the lower-left quadrant, corresponding to the VMH label.
