VMH

A coronal section of a brain, likely from a rodent, is shown against a black background. A large, symmetrical region in the center, representing the ventral medial hypothalamus (VMH), is highlighted in a solid blue color. A vertical white line runs through the center of the brain, and a horizontal white line intersects it, forming a crosshair that divides the image into four quadrants. The blue region is roughly butterfly-shaped, with its wings extending laterally and slightly anteriorly and posteriorly from the midline.
