Cb lobe

The image displays a coronal cross-section of a brain. A large, irregularly shaped region is highlighted in a vibrant blue color, primarily located in the posterior and inferior portions of the brain, which corresponds to the cerebellum. Within this blue region, on the left side of the image, there is a small, distinct spot of higher intensity, appearing as a mix of orange and yellow. The rest of the brain tissue is shown in grayscale. A white crosshair is overlaid on the image, with its center intersecting the blue region.
