

ABA:71020402

SPa dorsal

This is a coronal brain scan image, likely a PET or SPECT scan, showing a cross-section of the brain. The image is predominantly blue, indicating low signal intensity. A prominent, bright yellow and white spot is visible on the midline, just above the level of the ventricles, suggesting a focal area of high metabolic activity or tracer uptake. The brain's symmetrical structure is visible, with the hemispheres separated by a central vertical line. A horizontal line crosses the image, likely representing the level of the ventricles. The text 'ABA:71020402' is in the top left, and 'SPa dorsal' is in the bottom left.
