

ABA: 71232693

VA/VL

The image displays a cross-sectional brain scan, likely an fMRI or PET scan, with a color scale ranging from dark blue to bright yellow. A prominent, bright yellow-green spot is located in the central region of the brain, indicating a high level of activity or signal. This central spot is surrounded by a larger area of blue and light blue, which represents lower levels of activity. The brain's anatomical structure is visible, with the central region being the most active. The image is overlaid with a white crosshair, and the text 'ABA: 71232693' is in the top left and 'VA/VL' is in the bottom left.
