SCN

The image shows a coronal section of a brain against a black background. Two large, roughly circular regions are highlighted in a solid blue color, positioned symmetrically on either side of a central vertical axis. A thin white horizontal line and a thin white vertical line intersect at the center of the brain, forming a crosshair that divides the image into four quadrants. The blue regions appear to be located in the lateral areas of the brain, possibly representing specific nuclei or areas of activation.
