

ABA: 71836843

LH

This is a coronal PET scan image of a human brain. The image shows a blue-toned representation of metabolic activity. Two distinct, bright yellow-green spots are visible in the lower central region of the brain, indicating areas of high metabolic activity. These spots are located symmetrically on both sides of the midline. The rest of the brain shows a more diffuse, lower-level blue signal. A white crosshair is overlaid on the image, with the vertical line passing through the center and the horizontal line passing through the level of the two active spots. The text 'ABA: 71836843' is in the top left, and 'LH' is in the bottom left.
