

ABA:72081426

SN

This is an axial PET scan of a human brain. The image shows a cross-section of the brain with a color scale where blue represents low metabolic activity and yellow/white represents high metabolic activity. A prominent, bright yellow-white spot is visible in the central region, likely representing the basal ganglia or a similar deep brain structure. The surrounding brain tissue shows lower activity, indicated by blue and light blue colors. A white crosshair is overlaid on the image, with the vertical line passing through the central hyperactive region. The text 'ABA:72081426' is in the top left, and 'SN' is in the bottom left.
