SCN

The image shows a coronal section of a brain. A bright blue fluorescent signal is visible in the central region, specifically in the area labeled 'SCN' (Suprachiasmatic Nucleus). The signal is concentrated in two main lobes, one on each side of the midline, separated by a vertical line. The rest of the brain tissue appears dark, indicating low fluorescence. A horizontal line and a vertical line intersect at the center of the brain, likely representing the midline and a reference plane.
