CA1

This is a fluorescence microscopy image of a brain section, likely from a rodent. The image shows a coronal slice with a central dark region representing the brain's midline. The surrounding tissue is predominantly blue, indicating low fluorescence. Two distinct, curved, yellow-green structures are visible on either side of the midline, representing the CA1 region of the hippocampus. These structures are highlighted by a bright, curved band of fluorescence. A vertical white line runs through the center of the image, and a horizontal white line runs across the middle, intersecting at the center of the brain section.
