A posterior

This is an axial PET scan of the brain. The image shows a cross-section of the brain with various regions of metabolic activity. The color scale ranges from blue (low activity) to red (high activity). A prominent area of high activity is visible in the left posterior region, extending from the occipital lobe towards the posterior horn of the lateral ventricle. Other smaller areas of increased activity are seen in the bilateral posterior horns of the lateral ventricles and the bilateral posterior horns of the lateral ventricles. The rest of the brain tissue appears relatively normal with low metabolic activity.
