VA/VL

This is an axial PET scan of a human brain. The image displays a cross-section of the brain with a prominent ring of high metabolic activity, shown in yellow and red, along the outer edges of the cerebral cortex. The central regions of the brain, including the ventricles and deep gray matter structures, appear in shades of blue, indicating lower activity levels. A white crosshair is superimposed on the image, with the vertical line passing through the center of the brain and the horizontal line passing through the middle of the slice.
