Hb

This is an axial brain scan image, likely from a functional imaging study such as fMRI or PET. The image shows a cross-section of the brain with a color scale where blue represents lower values and yellow/red represents higher values. A prominent, bright yellow-orange spot is visible in the central region, likely representing the brain's ventricles or a specific area of high hemoglobin concentration. The surrounding brain tissue shows a mottled pattern of blue and light blue. A white crosshair is overlaid on the image, intersecting at the center of the brain.
