

ABA:79907941

DM

This figure is an axial brain scan, likely a PET or SPECT image, showing a cross-section of the brain. The image is predominantly blue, indicating low levels of activity. Two distinct, bright yellow-green regions are visible in the upper central part of the brain, symmetrically located on either side of the midline. These regions represent areas of increased metabolic or functional activity. A vertical white line runs down the center of the image, and a horizontal white line runs across the middle, intersecting at the center of the brain. The text 'ABA:79907941' is in the top left corner, and 'DM' is in the bottom left corner.
